

# Simple notes

## Introduction

This template can be used for creating simple notes. Nothing fancy but one step up from the standard  $\text{\LaTeX}$  article class file...

## Example

If you ever wanted to know the area of a circle, you could compute this integral:

$$A = \int_0^R \int_0^{2\pi} r \, d\varphi \, dr = \pi R^2. \quad (1)$$

**FIXME:** *It's great to make a note of things that need to be fixed.*
